

GENERAL

SMC's ALMAG-IS is an insertion-type electromagnetic flowmeter designed to measure the fluid velocity of conductive liquids in applications where hot-tap or insertion installations are preferred. This insertion mag meter is available in four standard lengths and may be installed in any pipeline with internal diameters ranging from 2" to 120" (50~3000 mm) and in permanent locations where cost or space limitations preclude the use of conventional in-line style meters. Available pipe connections include hot-tapped, DIN and NPT threads. The ALMAGIS is designed for use with conductive fluids including water, raw sewage, and wastewater, clarified water, RAS, WAS, primary sludge and cooling tower water, as long as adequate lengths of straight pipe are available where the sensor is installed.

➤ DIMENSIONS - Insertion

Calculation of Insertion Height for fixed and retractable types

$$H = L - A - B$$

H --- insertion height, mm

L --- nominal length of the sensor; L=600mm, 900mm, 1200mm, 1500mm

A --- insertion depth (D/8), mm

B --- thickness of the pipe wall, mm

Retractable type

Flanged type

Pipe Size	Insertion Depth (D)= pipe inner diameter
DN50~DN150	$(\frac{1}{8}) * D$
DN200~DN600	$(\frac{1}{8}) * D$ or $(\frac{1}{2}) * D$
DN700~DN8000	$(\frac{1}{8}) * D$

Model	Probe Length (mm)	DN Size
		Insertion Depth $(\frac{1}{8}) * D$
